

Assembly and instructions for terror kite / terror hawk kite

- 1. Faced downwards**
Connect the wingrods through the loop using the metal joint

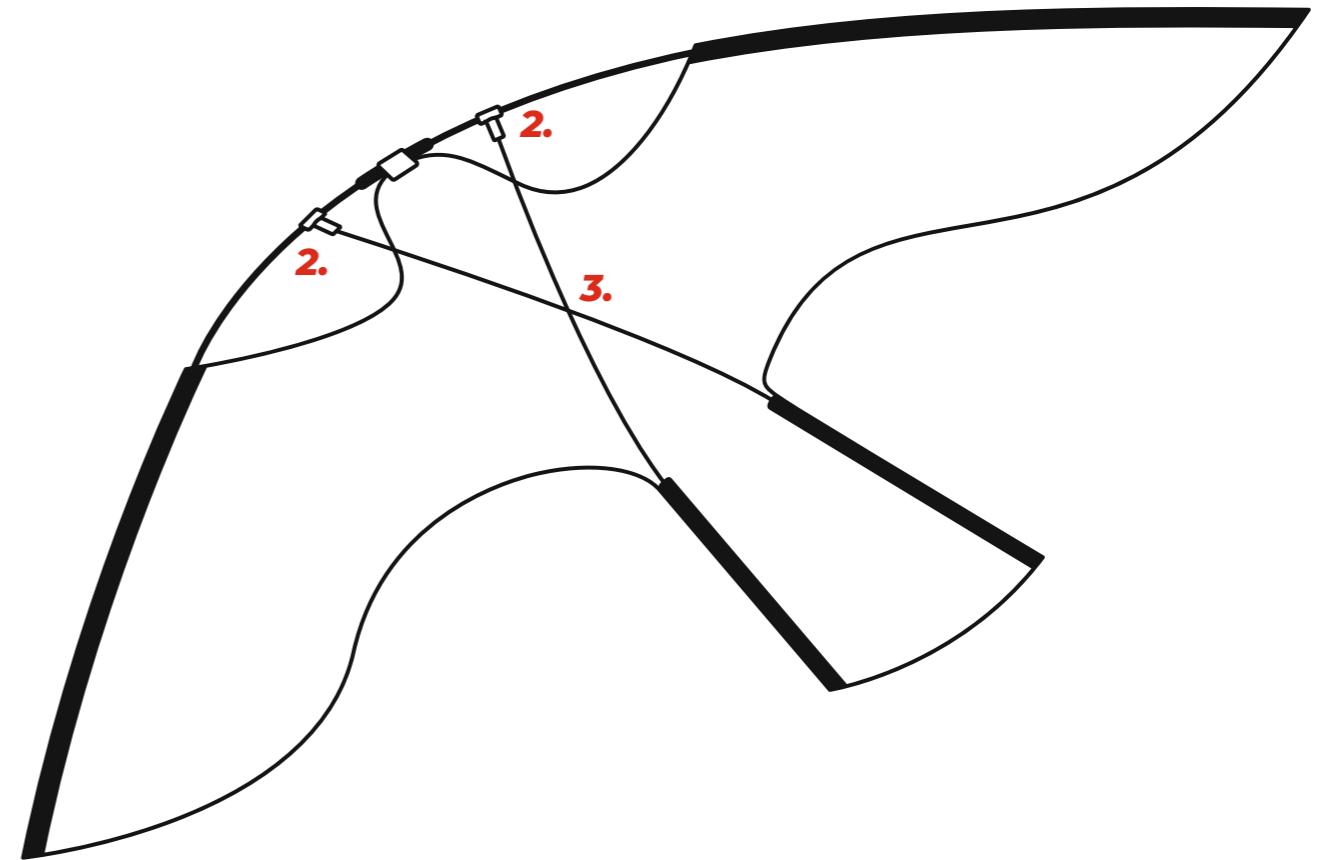

- 4. Tying the knot**
The tailrods will be crossed for all the hawk models

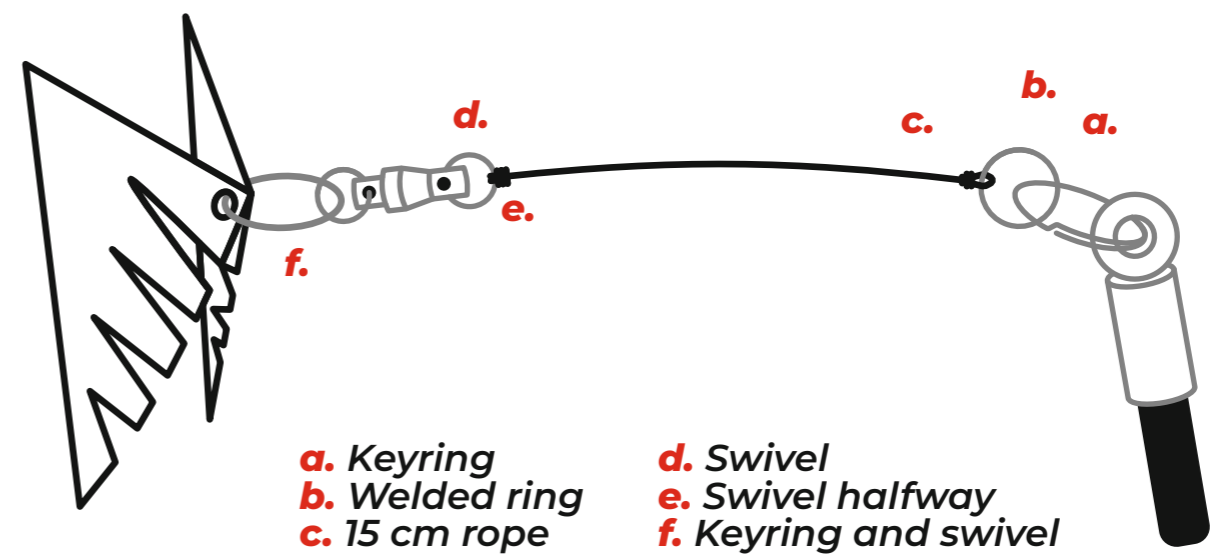

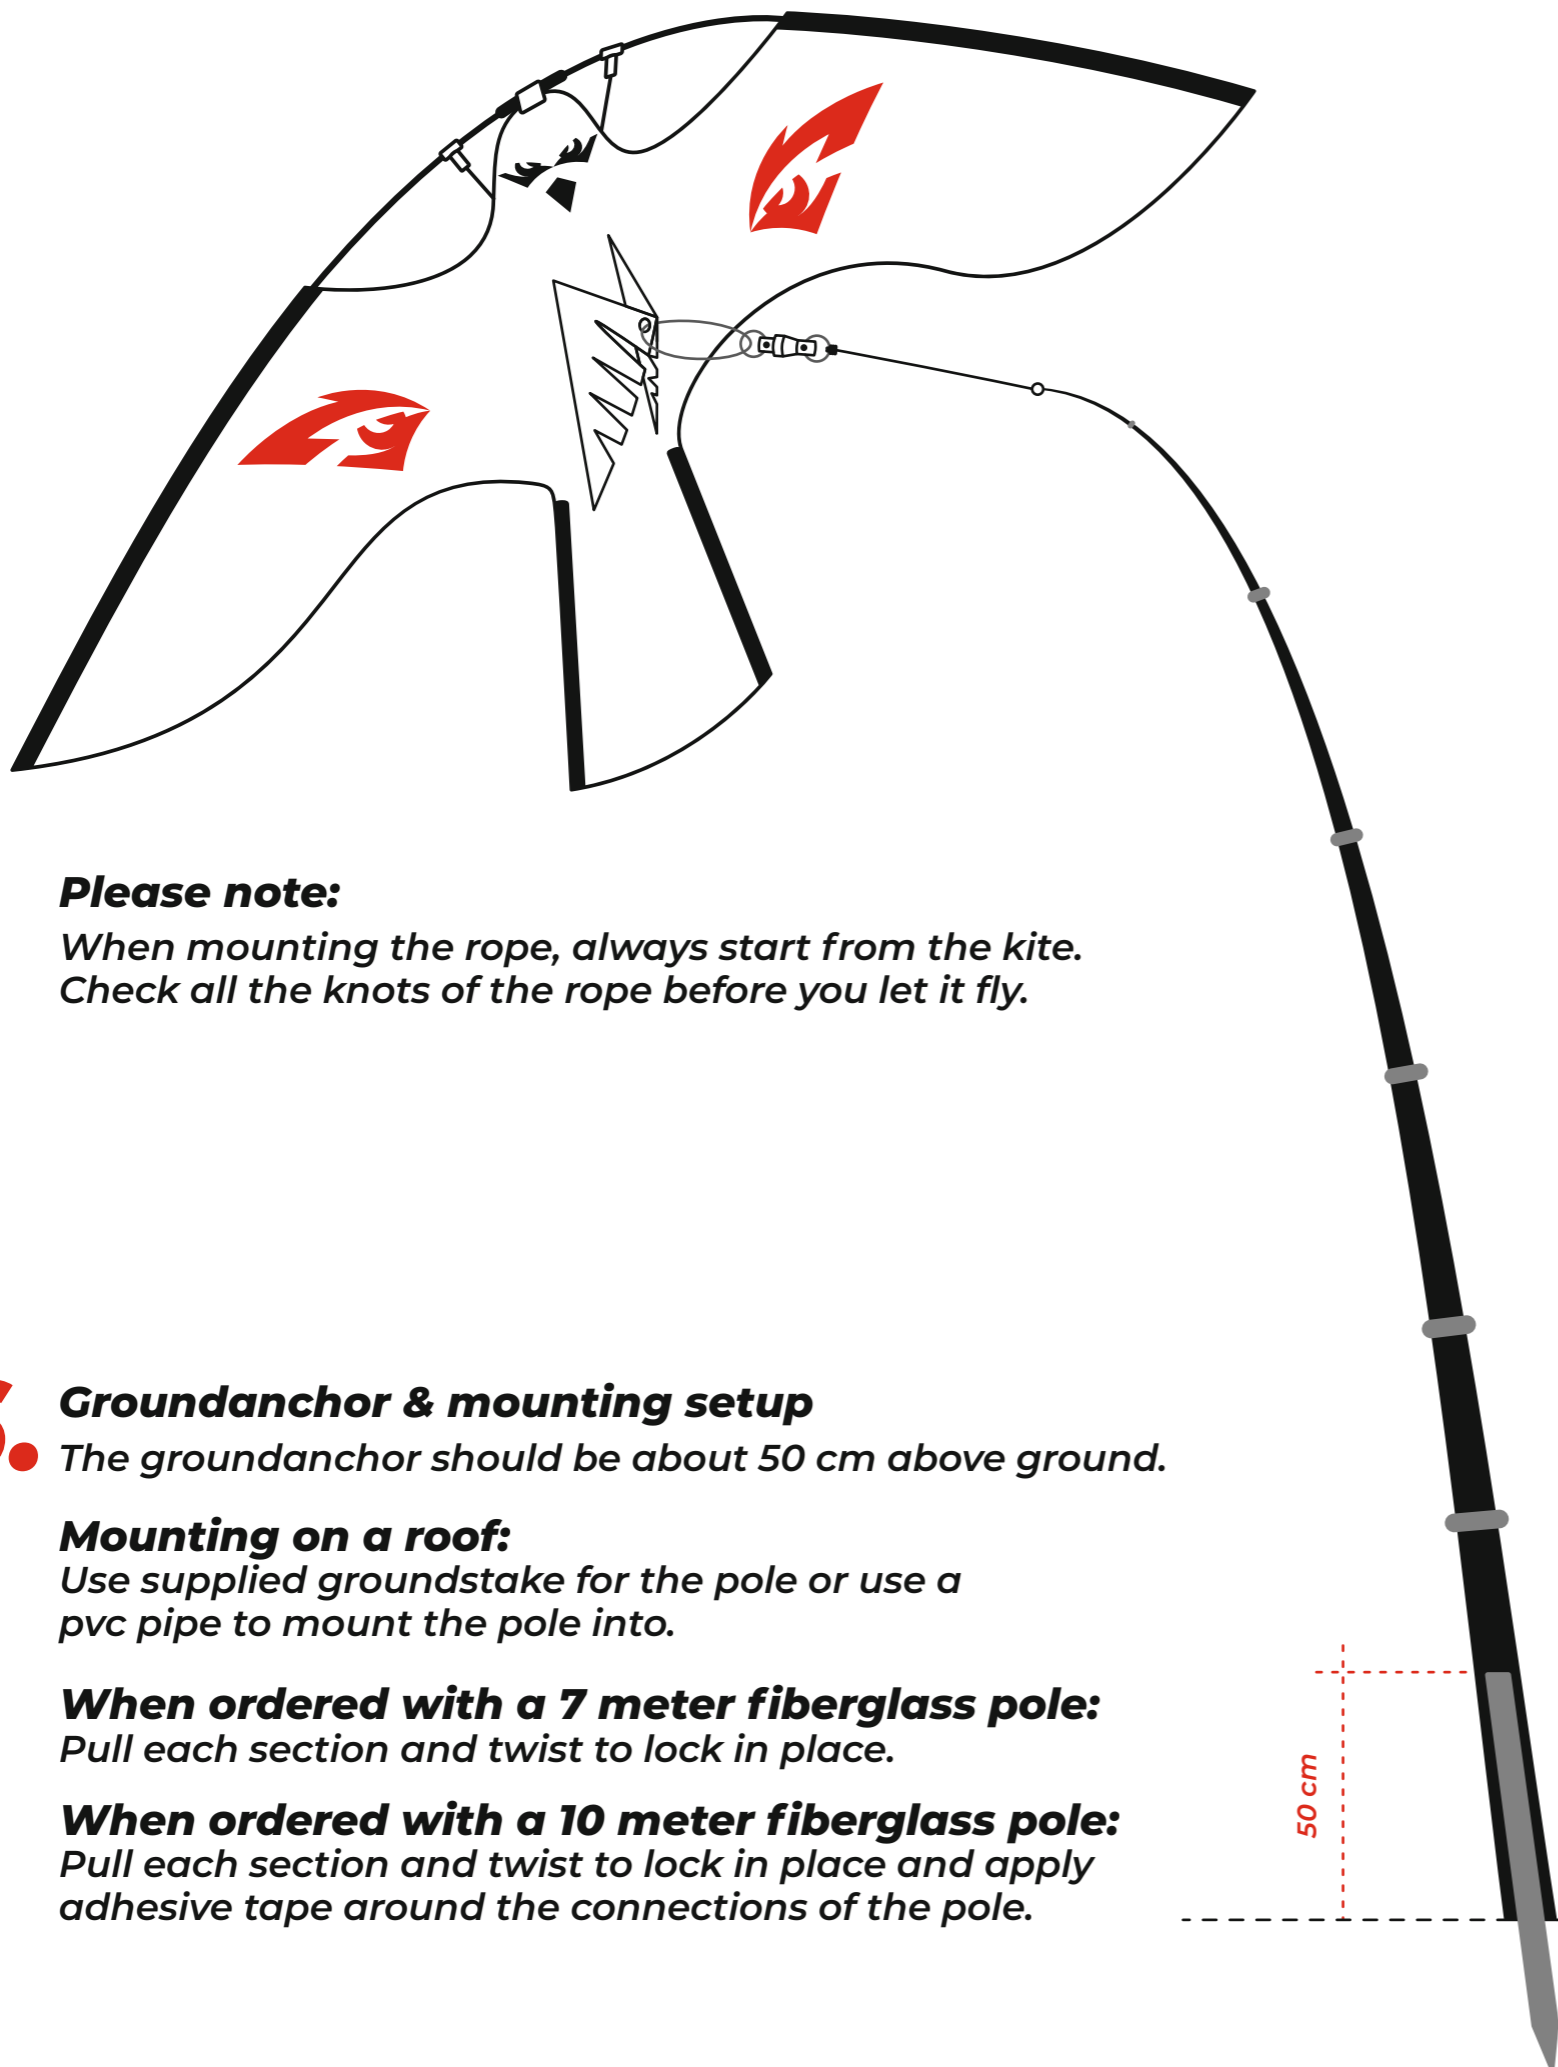

- 2. Top Side**
Connect the tailpens into the cavities

- 3. Top Side**
The tailrods will be crossed

- 5. Assembly of the keyring**
The tailrods will be crossed for all the hawk models

Please note:

When mounting the rope, always start from the kite. Check all the knots of the rope before you let it fly.

6. Groundanchor & mounting setup

The groundanchor should be about 50 cm above ground.

Mounting on a roof:

Use supplied groundstake for the pole or use a pvc pipe to mount the pole into.

When ordered with a 7 meter fiberglass pole:

Pull each section and twist to lock in place.

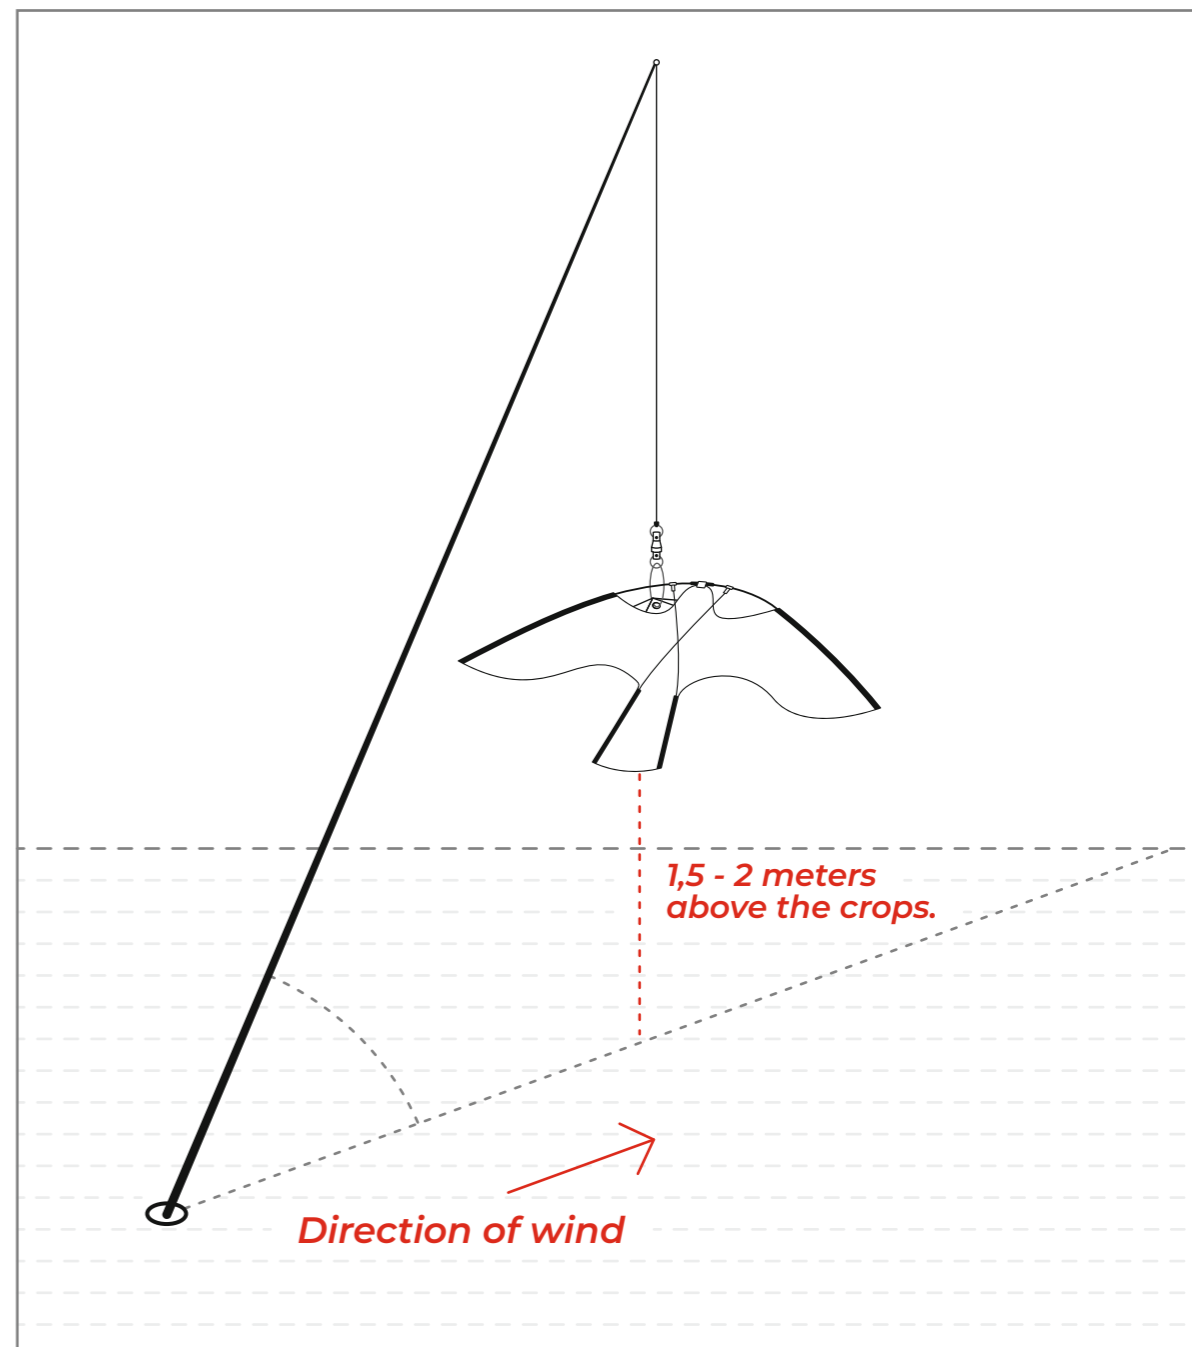

When ordered with a 10 meter fiberglass pole:

Pull each section and twist to lock in place and apply adhesive tape around the connections of the pole.

50 cm

7. Mounting the kite

Angle the pole downwind to prevailing winds, and make sure that the kite hangs well clear to avoid it wrapping around the pole.

Please note:

In case of strong winds, the kite must be disassembled to prevent damage. The warranty expires at wind speeds above 4 Beaufort (30km/h).
